**Subject:** QA'd Table  
Screening levels(kkQA).xlsx

I QA'd everything except CO 30 Drinking Water and CO Agriculture. Couldn't find the source and I combed through the document in the link to CO water quality. I also didn't QA background since I don't have those data.

Note: The CO adopted EPA Eco standards. I did find a few EPA Water + Organism standards that were not included (highlighted in yellow, Barium and Manganese). I also added EPA Fish Consumption standards which match CO with the exception of As (highlighted in yellow). The EPA values are at <http://water.epa.gov/scitech/swguidance/standards/current/index.cfm#hhtable>. In addition to eco, there are Human Health Surface Water Criteria for consumption of fish and water.
